

Conventional forms for customer approach such as posters, signs or flyers are hardly enough in everyday business life. Advertising-effective, digital displays are increasingly supplementing or replacing paper and posters, bringing desired business content and information directly to the point of Sale (POS). In particular, large-scale digital picture frames are ideal for these purposes, convincing with crisp photos, graphics and videos and impress customers, partners or guests.

To succeed in business it is necessary to make others see things as you see them.

The Business Line series meets the high demands of high-quality presentation and comfortable operation. Due to the programmable on and off times and the adjustable data access, the business line clearly stands out from a classic TV solution. Further features, such as a powerful external power supply, manifold connection options and long-lasting panel technology underline the unique position of the Braun Business Line frames.
